About Me

Computer Engineering student with a strong interest in Artificial Intelligence, Machine Learning, and Agentic system design. Seeking a challenging role to build scalable ML solutions and production-ready AI software. Eager to solve complex, real-world engineering problems, design intelligent systems, and continuously expand technical expertise.

Education

Vishwakarma Government Engineering College — Ahmedabad
Bachelor of Engineering in Computer Engineering | CGPA: 9.13 — *2027*

Skills

Programming Languages: Python, JavaScript
Libraries / Frameworks: Scikit-Learn, FastAPI, React, Langchain, LangGraph
Database & Tools: PostgreSQl, Supabase, Git,GitHub, Docker, LangSmith

Projects

Daily Intelligence | *FastAPI, Next.js, LangChain, LangGraph, Neon(pgvector)* — 2026

- Built an AI news aggregator using LangGraph for automated feed ingestion, semantic vector clustering, and an adaptive, newspaper-style layout with dynamic importance scoring
- Developed a multi-scope RAG chat interface enabling users to query grounded news sources with real-time streaming and citations.
- Project Link: daily-intelligence-five.vercel.app | Github

GitDecode | *LangGraph, Langchain, FastAPI, Supabase, Next.js, Gemini API, Inngest* — 2026

- Built a vectorless RAG engine using Tree-Sitter AST parsing and LangGraph agentic workflows for automated codebase Q&A and blast-radius analysis
- Built background job workflows using Inngest and Gemini context caching to reduce token usage by 80% and create interactive dependency graphs (Neo4j NVL).
- Project Link: gitdecode.app | Github

Exoplanet Detection | *Python, Scikit-learn, XGBoost ,optuna* — 2026

- Built a ML pipeline to detect exoplanets from NASA Kepler light-curve data using XGBoost and ensemble classifiers.
- Improved exoplanet detection by engineering light-curve features, applying SMOTE for data imbalance, and optimizing the model with Optuna.
- Project Link: exoplanet-detection-kepler.streamlit.app | GitHub

Activities

- **VGEC E-Cell** — 2025 - Present
  - Helped To Built and update the official E-Cell website.
  - Managed student sign-ups and created digital certificates for event participants.

Certifications

- Crash Course on Python By Coursera — 2023
- Cyber Gyan, C-DAC Workshop — 2024
- AWS Certified Cloud Practitioner Essentials — 2025
- AWS Educate Machine Learning Fundamentals — 2026
