ABOUT ME

I am Highly motivated Computer Engineering student proficient in programming, algorithms, and machine learning. Seeking a challenging role to leverage technical skills in software development, AI, and scalable ML solutions. Eager to collaborate on real-world projects and continuously enhance expertise, bringing experience in various programming languages and ML frameworks.

EDUCATION

Vishwakarma Government Engineering College Bachelor of Engineering in Computer Engineering CPI: 9.13 • Relevant coursework: DSA, Computer Networks, DBMS, OS, OOP, Data Mining	Ahmedabad, India 2027
Bhagwati Vidyalaya HSC (PCM) Percentile Rank – 96.39	Ahmedabad, India 2023

SKILLS

Programming Languages: Python, Java, C++, JavaScript, TypeScript
Libraries / Frameworks: Scikit-Learn, FastAPI, TensorFlow, Keras, Streamlit, React, Express.js
Cloud & DevOps: Git/GitHub, GCP, AWS, Docker

UNIVERSITY PROJECTS

Agenticpilot <i>React, Next.js, Supabase, LangGraph, Google APIs</i> - Developed an automation platform for Gmail replies and social media posting (X, LinkedIn). - Integrated Gmail and social APIs for automated responses and content scheduling. - Built a scalable frontend with Next.js and React, backed by Supabase for database management and user authentication and LangGraph for automations. - Implemented OAuth-based authentication for secure Gmail and LinkedIn API access. - Project Link: agenticpilot.app GitHub	Present
Movie Recommendation System <i>Python, Scikit-learn, Streamlit</i> - Built a content-based recommendation system using similarity algorithms. - Implemented ML models with Scikit-learn and performed data preprocessing. - Dockerized entire application and deployed on Render. - Project Link: movie-recommender-05sq.onrender.com GitHub	Present
Exoplanet Detection using Kepler Light Curves <i>Python, Scikit-learn, XGBoost, optuna</i> - Built an end-to-end ML pipeline to detect exoplanets from NASA Kepler mission photometric light-curve data using ensemble classification methods. - Applied SMOTE resampling to handle severe class imbalance between confirmed exoplanet transit signals and false positives in the dataset. - Performed rigorous cross-validated model comparison across multiple classifiers; selected the best-performing ensemble model for robust final classification. - Conducted feature engineering on flux time-series data including normalization, phase-folding, and statistical feature extraction to improve signal detection accuracy. - Project Link: exoplanet-detection-kepler.streamlit.app GitHub	Present

Activities

- Tech Core Member, VGEC E-Cell (2025 – Present) — Built and maintained the official E-Cell website and event registrations
- Campus Body Member, GeeksforGeeks (2025-26) — Promoted coding culture and tech community engagement on campus

CERTIFICATIONS

Crash Course on Python	2023
Cyber Gyan, C-DAC Workshop	2023
AWS Certified Cloud Practitioner Essentials	2025
AWS Educate Machine Learning Fundamentals	2026
